

Enkitech implements Oracle Grid Control in five working days with InstantOn deployment.

In today's corporate climate, the need for business applications to operate up to their specifications has never been more critical. To ensure performance and reliability, you need a solution that will monitor the entire application and database infrastructure – including operating systems, networks, disk sub-systems and other critical components. Because if any of those components fail, the entire application will be rendered useless. That's why you need the integrated security of Oracle Grid Control as implemented by the experts at Enkitech.

enkitech

ORACLE®

What you need to know. When you need to know it.

Enkitech bases its infrastructure monitoring solutions on Oracle Enterprise Management Grid Control software and add-on Management Packs, which allows for detailed monitoring and reporting of any Oracle Server product. Enkitech then takes this tightly integrated tool and configures it to become a highly customized alert system. We then use our own expertise to create a Grid Control setup that keeps the administration team up to date with relevant information – without being inundated with unnecessary, time-wasting alerts. Additional benefits include:

- ▶ Proactive warnings about impending database and operating system issues
- ▶ Increased system uptime and performance mitigates risk
- ▶ Both real-time and historical reporting on system performance and uptime – (this is a key feature of Grid Control as compared to Oracle Enterprise Manager which only reports on real-time statistics)
- ▶ Scheduling function can be used to execute both database- and operating system-level jobs
- ▶ Database manipulation tasks (expand a tablespace, fail over to a standby instance, etc) can be done via the Grid Control console

Take control in five days.

In just one business week, Enkitech's InstantOn deployment services can have an Oracle Grid Control system operational within your infrastructure. And it only costs \$6,000. An Enkitech Grid Control expert will, in five days, deliver the following:

- ▶ Installation and configuration of a single Grid Control repository
- ▶ Determination of all observable targets
- ▶ Configuration of the top 10 database target monitors and their corresponding alerts
- ▶ Configuration of three key operating system parameters
- ▶ Implementation of the Diagnostic and Tuning packs

Five days is all it takes to give your company the power of in-depth database systems monitoring and the peace of mind it brings. That's the power of Oracle solutions combined with Enkitech experience.

The Enkitech difference.

Enkitech is a Dallas-based information technology services firm specializing in Oracle. Our database consultants average 15 years of hands-on Oracle experience, making them some of the most knowledgeable Oracle experts in the country. We offer services in Oracle Database Administration, Oracle Application Development and our unique On Call Service – an innovative offering that provides remote services for Oracle Systems. With a rare mix of development and database administration expertise, Enkitech has the ability to step into the largest, most complex environments and instantly make an impact.
